STRAND
DISPATCH COMMAND

strand
illance. evolved.

As the leader in intuitive digital IP surveillance software, Strand is committed to creating innovative solutions to help organizations protect their assets. Strand's Enterprise solution for large scale applications and for smaller, distributed applications

Strand's revolutionary Dispatch Command

allows users to create and dispatch customizable matrix configurations with a push of a button anywhere on the network without the need for additional hardware. Dispatch Command eliminates the traditional matrix limitations by utilizing cutting-edge network technology which allows live video content to be pushed to remote locations and mobile vehicles with one click of the mouse.

1	Dispatch Command allows users to view cameras from anywhere on the network, not just cameras on a local server.
2	Dispatch Command allows mobile users to view and push video to remote monitors on a wireless or broadband network.
3	Matrix settings can be exported as XML files so settings can be emailed and/or saved to USB memory.
4	No preset matrix templates to limit the display size and scope of monitor.
5	Users are able to set up and control multiple monitors on a single PC
6	No matrix switcher hardware has to be purchased, installed or maintained.
7	No additional software to download.
8	No additional plug-in or codec needed to run this feature.

Actionable video on demand: Dispatch Command

Step 1

Create a customizable video wall matrix for 24/7 monitoring

Step 2

Authorize users for Dispatch Command

Step 3

Push on demand video file to remote locations or mobile units
