

Decidedly different

Strand v8.0 video surveillance solutions go beyond traditional monitoring and video playback. Strand offers a unique commercial-grade solution featuring *user-centric* functionality not available on other surveillance software.

Strand's Government & Homeland security ROI Commitment

Strand's cost effective, digital technology provides:

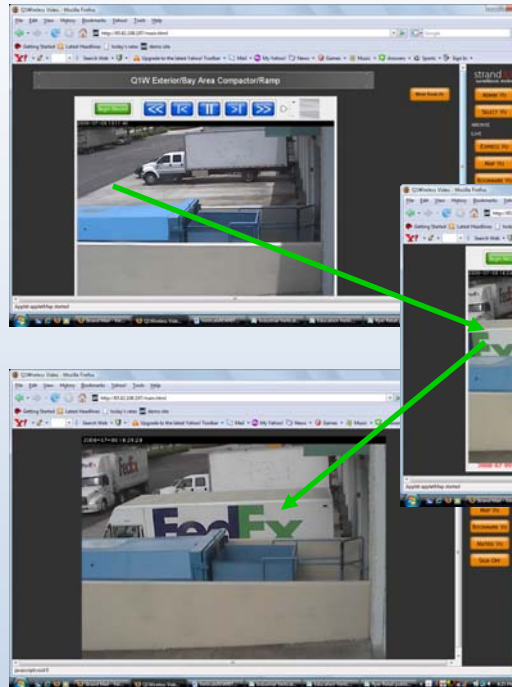

- Intuitive, user-centric, design which reduces the need for complicated and costly user training
- Total system diagnostics that ensures optimal system performance
- Scalable and flexible architecture that easily adapts for growth
- Web-enabled thin-client application which reduces the need for site-based product implementation
- Configurable administrative functions and multi-level security controls

Strand Government & Homeland Security Enterprise Software

IP video surveillance in the government and homeland security industry includes everything from establishing secure environments in government facilities to deterring crime and providing safety in public spaces. Strand's revolutionary software, built to withstand the rigors of a government environment, integrates all sites under one system. Whether accessing one facility or many, Strand's user-centric software allows information to be readily accessible and secure.

Advanced Event Wrap

Advanced Event Wrap feature that allows users to quickly capsulate video by using variable frame search methodologies.
